

The American Turmeric Company

HEAVY METAL TESTING – TURMERIC

We regularly test our turmeric for heavy metals. A copy of our latest test is attached. We certify that the turmeric rhizomes and plants which we provide to our clients come from the same area where the tested rhizomes are located.

TEST RESULTS:

The following six “heavy” metals are included in our tests:

- Iron
- Lead
- Mercury
- Nickel
- Zinc
- Arsenic

NOTE: The attached test results has the words “Soil Analysis” at the top but the material tested was our turmeric itself – not the soil.

We hereby certify that the tests results shown on the attached page are from the turmeric which we are currently making available on our website. We further certify that we have not added any fillers or other material to our products that are not clearly stated on the product label.
